Abdul Kaleem Shaik

9676745715 | abdulkaleem.dev@gmail.com | LinkedIn | GitHub | LeetCode (795+) | Portfolio

Summary: Backend-focused Software Engineer with 2 years of experience building scalable systems with Java, Spring Boot, Node.js, and MongoDB. Improved API p95 latency by **25%**, cut DB load by **40%** via Redis caching, and shipped 8 production features serving 10K+ users. Strong DSA foundation (**795+ LeetCode**, 85 Hard) with hands-on cloud and containerization experience.

Technical Skills

Languages: Java, JavaScript, TypeScript, SQL
Backend: Spring Boot, Node.js, Express.js, Hibernate, Spring Security, JWT, REST APIs, WebSockets, BullMQ
Databases: MySQL, MongoDB, Redis **Frontend:** React.js, Next.js, Redux, HTML5, CSS3
DevOps & Cloud: Docker, Kubernetes, Jenkins, AWS (EC2, S3, Lambda), CI/CD, Git
Concepts: DSA, OOP, System Design, SOLID, Caching, DB Indexing, REST API Design, Multi-tenancy

Experience

Appitsimple Ahmedabad, India
Software Engineer | *Node.js · MongoDB · Redis · React.js · JWT · AWS Lambda · Docker* *Jul 2025 – Present*

- Re-engineered MongoDB aggregation pipelines with compound indexing and query projection, reducing p95 latency by **25%** across services handling **10K+ concurrent users**.
- Integrated Redis as a distributed caching layer for session management and high-frequency reads, cutting **DB load by 40%** and improving throughput on critical endpoints.
- Designed a zero-trust auth system with JWT refresh-token rotation, Redis-backed blacklisting, and granular RBAC, eliminating session fixation vulnerabilities across 3 web apps.
- Architected an automated cleanup pipeline via **AWS Lambda** for periodic deletion of stale MongoDB records, reducing **storage costs by 16%** and improving query performance.

Software Engineer Intern | *MERN Stack · MySQL · REST APIs · SOLID* *Jan 2025 – Jul 2025*

- Shipped **8 production features** end-to-end using the MERN stack, contributing to a **20% uplift** in overall application performance benchmarks.
- Resolved N+1 query issues and added composite indexes on MySQL and MongoDB, reducing critical API response times by **30%** (~800ms → ~560ms).
- Cut React bundle size by **35%** and initial load time by **20%** via lazy loading, React.memo, and Webpack chunk splitting.

Projects

NotifyFlow: Multi-Tenant Notification Engine | *Node.js, BullMQ, Redis, MongoDB, WebSockets, Docker* 2026

- Built a multi-channel delivery platform (in-app via WebSocket, email, HMAC-signed webhooks) with per-tenant isolation, async **BullMQ** queues, idempotent retries, and dead-letter handling.
- Hand-wrote a Redis sorted-set **sliding-window rate limiter**, used Protocol Buffers on internal queues, and scaled stateless workers horizontally with Jenkins CI/CD.

BookFlow: Multi-Tenant SaaS Booking Platform | *Node.js, React, MongoDB, Redis, Docker, Stripe* 2026

- Architected a production-ready multi-tenant booking engine (single-DB, shared-schema) with strict `tenantId` isolation and hierarchical RBAC across 5 roles via scoped MongoDB queries.
- Integrated **Stripe PaymentIntents** with webhook sync and a coupon engine; implemented atomic MongoDB waitlist allocation to prevent race conditions, and Dockerized the full stack.

Agri Connect: Farmer-to-Customer Sales Platform | *Spring Boot, React, MySQL, Jenkins, AWS* 2024

- Built a full-stack marketplace connecting farmers directly to consumers for transparent, real-time produce trading and order management.
- Developed Spring Boot microservices with RESTful APIs, Spring Security + JWT RBAC, and Jenkins CI/CD; deployed on AWS EC2 with S3 for asset storage.

Education & Certifications

Parul University Vadodara, India
B.Tech in Computer Science | CGPA: 8.58/10 *2021 – 2025*
Oracle Certified Foundations Associate – Java | **LeetCode** – 795+ problems (430 Medium, 85 Hard), 500-day badge | **Shining Star Award** – Awarded twice at Appitsimple for exceptional performance
