Summary

Full-Stack Software Engineer with 1.8 years of experience building scalable backend systems and REST APIs using Java (Spring Boot), Node.js and React. Experienced with MySQL, MongoDB, Redis caching, JWT-based security, microservices and Docker-based CI/CD. Promoted from intern in 6 months and received the Shining Star Award twice; strong foundation in data structures and algorithms.

Technical Skills

Languages: Java, JavaScript, SQL
Backend: Node.js, Spring Boot, Express.js, REST APIs, Microservices, JWT
Frontend: React.js, HTML5, CSS3
Databases: MySQL, MongoDB, Redis
Cloud & DevOps: AWS, Docker, Kubernetes, Git, Linux
Core: Data Structures & Algorithms, OOP, SOLID Principles

Experience

Appitsimple – B2B SaaS Product Company Ahmedabad, India

Software Engineer | Node.js, Express, MongoDB, MySQL, Redis, React.js, AWS *Jan 2025 – Oct 2026*

- Owned **10+ features** end-to-end for a B2B SaaS platform – MongoDB schema design, **REST APIs** in Node.js/Express and React UI – shipped in Agile sprints with product and QA teams.
- Optimized **8+ high-traffic MongoDB** aggregation pipelines by redesigning them with compound indexes and projections, eliminating full-collection scans (verified via `explain()`).
- Introduced **Redis caching** for sessions and **15+ high-frequency read APIs**, cutting repeated MongoDB round-trips and letting the team defer a planned database upgrade.
- Designed **JWT auth** with refresh-token rotation, Redis-backed token blacklisting and granular **RBAC**, closing privilege-escalation gaps across 3 production apps.
- Built an **AWS Lambda** job to auto-purge stale MongoDB records, fixing unbounded data growth; removed N+1 query patterns on **10+ MySQL and MongoDB endpoints** with composite indexes.
- Developed **4 third-party API integrations** to sync data reliably between external platforms and the product; debugged **production issues**, reviewed pull requests and supported releases.

Projects

NotifyFlow: Distributed Multi-Tenant Notification Engine
Node.js, Express, BullMQ, Redis Pub/Sub, WebSocket, Protobuf, MongoDB, React, Docker, GitHub Actions GitHub

- Designed a **4-service architecture** (API, BullMQ worker, WebSocket server, dashboard) that decouples ingestion from delivery.
- Streamed events as **Protocol Buffers over Redis Pub/Sub**, letting WebSocket servers scale horizontally with no shared state.
- Delivered notifications on **3 channels** (in-app, email, signed webhooks) with retries, a dead-letter queue and idempotency.
- Added a per-tenant Redis **sliding-window rate limiter**, JWT rotation, Prometheus metrics and Swagger docs.

BookFlow: Multi-Tenant SaaS Booking Platform
Node.js, Express, React, MongoDB, Redis, Stripe, Docker, Kubernetes, GitHub Actions GitHub

- Built a **multi-tenant** platform with strict `tenantId` data isolation and **RBAC across 5 roles**.
- Prevented double-booking with a **Redis distributed lock** (SET NX + Lua release) and atomic coupon redemption.
- Added **Redis cache-aside caching** for services and slots with TTLs, invalidated on every booking or schedule change.
- Integrated **Stripe payments** with idempotent webhooks; secured auth with rate limiting and Helmet.

AgriConnect: Farmer-to-Customer Sales Platform
Java, Spring Boot, Spring Security, JWT, MySQL, Flyway, Docker, React, GitHub Actions GitHub

- Built a layered **Spring Boot REST API** with **Spring Security** JWT auth, role-based access and account lockout.
- Stopped overselling under concurrent checkouts with **row locks + optimistic locking**; fixed a MySQL deadlock.
- Centralized error handling with **@RestControllerAdvice**, returning consistent JSON errors and HTTP 409 on lock conflicts.
- Managed schema changes with **Flyway** migrations; containerized with Docker and automated builds in CI.

Education & Certifications

Parul University Vadodara, India

B.Tech in Computer Science – CGPA: 8.58/10 *2021 – 2025*

Oracle Certified Foundations Associate – Java
