Summary

Full-Stack Software Engineer with 2 years of experience building real-time backend systems using Node.js and Spring Boot. Designed NotifyFlow, a multi-tenant notification engine with 4 decoupled services, BullMQ queues, Redis Pub/Sub, and Protocol Buffers. Oracle Certified Foundations Associate (Java) with a strong foundation in data structures and algorithms.

Technical Skills

Languages: Java, JavaScript (Node.js), TypeScript, SQL
Backend: Spring Boot, Spring Security, Express.js, REST APIs, Microservices, JWT, BullMQ
Real-Time & Messaging: WebSocket, Redis Pub/Sub, Protocol Buffers (protobuf), Event-Driven Architecture
Frontend: React.js, Next.js, Redux Toolkit, HTML5, CSS3, Webpack
Databases: MySQL, MongoDB, Redis
Cloud & DevOps: AWS (EC2, S3, Lambda), Docker, Kubernetes, Jenkins, GitHub Actions, CI/CD, Git, Linux
Core: Data Structures & Algorithms, OOP, SOLID Principles, RBAC, Multi-Tenancy, System Design

Experience

Appitsimple – B2B SaaS Product Company Ahmedabad, India
Software Engineer | Node.js, MongoDB, Redis, React.js, JWT, AWS Lambda *Jan 2025 – Present*

- Optimized high-traffic MongoDB queries by redesigning aggregation pipelines with compound indexes and projections, eliminating full-collection scans (verified via `explain()` plans).
- Introduced Redis as a caching layer for sessions and high-frequency reads, cutting repeated MongoDB round-trips and helping the team defer a planned database upgrade.
- Designed a zero-trust auth system with JWT refresh-token rotation, Redis-backed token blacklisting, and granular RBAC – closing a class of privilege-escalation bugs across 3 production apps.
- Built an AWS Lambda job to auto-purge stale MongoDB records, fixing an unbounded data growth issue that was slowing nightly analytics.
- Fixed N+1 query patterns on MySQL and MongoDB endpoints and added composite indexes; also resolved React re-render and bundle-size issues using React.memo, lazy loading, and Webpack code-splitting.
- Started as an intern and converted to full-time after 6 months, based on ownership of end-to-end features across the MERN stack – schema design, REST APIs, and React UI.

Projects

NotifyFlow: Distributed Multi-Tenant Notification Engine GitHub
Node.js, BullMQ, Redis Pub/Sub, WebSocket, Protobuf, MongoDB, React, Docker, Jenkins

- **4-service architecture** (REST API, BullMQ worker, WebSocket server, React dashboard) decoupling ingestion and delivery.
- Streamed events as **Protocol Buffers over Redis Pub/Sub**, so WebSocket replicas scale with no shared state.
- Reliable delivery on **3 channels** (in-app, email, HMAC-signed webhooks) with retries, dead-letter queue and idempotency.
- Redis **sliding-window rate limiter**, JWT rotation, **Prometheus metrics**, OpenAPI docs; 144 tests in CI.

BookFlow: Multi-Tenant SaaS Booking Platform GitHub
Node.js, Express, React, MongoDB, Redis, Stripe, Docker, Kubernetes, GitHub Actions

- Shared-schema multi-tenant engine with strict `tenantId` isolation and RBAC across 5 roles via scoped queries.
- Prevented double-booking with a **Redis distributed lock** (SET NX + Lua release) and atomic coupon usage.
- **Stripe PaymentIntents** with idempotent webhooks; rate-limited auth, Helmet, Swagger; 53 tests in CI.

AgriConnect: Farmer-to-Customer Sales Platform GitHub
Java, Spring Boot, Spring Security, JWT, MySQL, Flyway, Docker, React

- Layered Spring Boot REST API; **row locks + optimistic locking** stop concurrent checkouts overselling stock.
- JWT role-based security with account lockout; Flyway migrations, Docker, 70 tests in CI on MySQL.

Education & Certifications

Parul University Vadodara, India
B.Tech in Computer Science – CGPA: 8.58/10 *2021 – 2025*

Oracle Certified Foundations Associate – Java | **LeetCode** – 795+ problems solved | **Shining Star Award** (2x)
